# Aim:

S.No: 8

### **Problem Description:**

Exp. Name: Knapsack Problem

Given the weights and values of N objects, place them in a bag with a capacity of W to calculate the bag's maximum possible total value. To put it another way, given are two integer arrays, val[0..N-1] and wt[0..N-1], which, respectively, represent values and weights connected to N items.

Additionally, given an integer W that represents the capacity of a knapsack, determine the largest value subset of val[] such that the total of its weights is less than or equal to W. An item cannot be broken; you must either pick it in its entirety or not at all (0-1 property).

**Note:** Please take a note that we only have one quantity of each item.

#### **Constraints:**

```
1 \le N, W \le 1000
1 \le \text{val[i]}, \text{wt[i]} \le 1000
```

#### **Input Format:**

- The first line represents the size of both the arrays N.
- The second line represents the set of elements of val[].
- The third line represents the set of elements of wt[].
- The next line contains an integer representing the knapsack capacity W.

### **Output Format:**

An integer representing the maximum total value in the knapsack which is smaller than or equal to W.

#### Sample Test Case:

```
Input: N = 3, W = 4
values[N] = \{1,2,3\}
weight[N] = \{4,5,1\}
Output: 3
```

## **Source Code:**

#### maxValueInKnapsack.c

```
#include <stdio.h>
int max(int a, int b){
   return (a>b) ? a:b;
int knapsack(int val[], int wt[], int n, int W){
   int dp[n+1][W+1];
   for(int i=0;i<=n;i++){
      for(int w=0; w<=W; w++){
         if(i==0 || w==0)
            dp[i][w]=0;
         else if(wt[i-1]<=w)</pre>
            dp[i][w]=max(val[i-1]+dp[i-1][w-wt[i-1]],dp[i-1][w]);
         else
            dp[i][w]=dp[i-1][w];
```

```
}
   return dp[n][W];
}
int main(){
   int n;
   scanf("%d",&n);
   int val[n],wt[n];
   for(int i=0;i<n;i++){</pre>
      scanf("%d",&val[i]);
   }
   for(int i=0;i<n;i++){</pre>
      scanf("%d",&wt[i]);
   }
   int W;
   scanf("%d",&W);
   int result=knapsack(val,wt,n,W);
   printf("%d\n",result);
   return 0;
}
```
